**Hut 8 Mining Corp.**  
**Management's Discussion and Analysis**  
**Amended and Restated**  
**For the three and six months ended June 30, 2020**

**Introduction**

This Management's Discussion and Analysis ("MD&A") is dated August 13, 2020, and should be read in conjunction with the unaudited condensed consolidated interim financial statements for the three and six months ended June 30, 2020 ("Q2-2020"), the audited consolidated financial statements for the year ended December 31, 2019, the annual MD&A for the year ended December 31, 2019, and the annual information form dated April 11, 2020 of Hut 8 Mining Corp., each of which is available on SEDAR at [www.sedar.com](http://www.sedar.com).

In this MD&A, unless the context otherwise requires, all references to "we", "us", "our", "Hut 8", and "the Company" refer to Hut 8 Mining Corp. and its subsidiaries, and all references to "Management" refer to the directors and executive officers of the Company.

Unless otherwise stated, results are reported in Canadian dollars, unless otherwise noted. The Company applies International Financial Reporting Standards ("IFRS"), as issued by the International Accounting Standards Board and interpretations issued by the IFRS Interpretations Committee. In the opinion of Management, all adjustments considered necessary for a fair presentation have been included. The results presented in the MD&A are not necessarily indicative of the results that may be expected for any future period.

**Cautionary Note Regarding Forward-Looking Information**

This MD&A contains certain forward-looking information and forward-looking statements, as defined in applicable securities laws (collectively referred to herein as "forward-looking statements"). These statements relate to future events or the Company's future performance. All statements other than statements of historical fact are forward-looking statements. Often, but not always, forward-looking statements can be identified by the use of words such as "plans", "expects", "is expected", "budget", "scheduled", "estimates", "continues", "forecasts", "projects", "predicts", "intends", "anticipates" or "believes", or variations of, or the negatives of, such words and phrases, or state that certain actions, events or results "may", "could", "would", "should", "might" or "will" be taken, occur or be achieved. Forward-looking statements involve known and unknown risks, uncertainties and other factors that may cause actual results to differ materially from those anticipated in such forward-looking statements. The forward-looking statements in this MD&A speak only as of the date of this MD&A or as of the date specified in such statement.

Inherent in forward-looking statements are risks, uncertainties and other factors beyond the Company's ability to predict or control. For a list of the factors that could affect the Company, please make reference to those risk factors referenced the Annual Information Form dated April 3, 2020. Readers are cautioned that such risk factors, uncertainties and other factors are not exhaustive. Actual results and developments are likely to differ, and may differ materially, from those expressed or implied by the forward-looking statements contained in this MD&A.

Forward-looking statements involve known and unknown risks, uncertainties and other factors that may cause actual results to differ materially from those anticipated in such forward-looking statements. The forward-looking statements in this MD&A speak only as of the date of this MD&A or as of the date specified in such statement. Specifically, this MD&A includes, but is not limited to, forward-looking statements regarding: the Company's ability to meet its working capital needs at the current level for the next twelve-month period; management's outlook regarding future trends; sensitivity analysis on financial instruments, which may vary from amounts disclosed; and general business and economic conditions.

All forward-looking statements herein are qualified by this cautionary statement. Accordingly, readers should not place undue reliance on forward-looking statements. The Company undertakes no obligation to update publicly, or otherwise revise, any forward-looking statements, whether as a result of new information or future events or otherwise, except as may be required by law. If the Company does update one or more

**Hut 8 Mining Corp.**  
**Management's Discussion and Analysis**  
**Amended and Restated**  
**For the three and six months ended June 30, 2020**

forward-looking statements, no inference should be drawn that it will make additional updates with respect to those or other forward-looking statements, unless required by law.

**Non-GAAP Measures**

This MD&A presents certain non-GAAP ("GAAP" refers to Generally Accepted Accounting Principles) financial measures to assist readers in understanding the Company's performance. These non-GAAP measures do not have any standardized meaning and therefore are unlikely to be comparable to similar measures presented by other issuers and should not be considered in isolation or as a substitute for measures of performance prepared in accordance with GAAP. Management uses these non-GAAP measures to supplement the analysis and evaluation of operating performance.

Throughout this MD&A, the following terms are used, which are not found in the Chartered Professional Accountants of Canada Handbook and do not have a standardized meaning under GAAP.

*EBITDA (Earnings before Interest, Taxes, Depreciation, and Amortization)*

- "EBITDA" represents net income or loss excluding net finance income or expense, income tax or recovery, depreciation, and amortization.
- "Adjusted EBITDA" represents EBITDA adjusted to exclude share-based compensation, fair value loss or gain on revaluation of digital assets, write-offs, and costs associated with one-time transactions (such as listing fees).
- "Adjusted EBITDA Margin" represents Adjusted EBITDA as a percentage of revenue.

EBITDA, Adjusted EBITDA, and Adjusted EBITDA Margin are used to show ongoing profitability without the impact of non-cash accounting policies, capital structure, and taxation. This provides a consistent comparable metric for profitability.

"Mining Profit" represents gross profit (revenue less cost of revenue), excluding depreciation. "Mining Profit Margin" represents Mining Profit as a percentage of revenue. Mining Profit and Mining Profit Margin show the cash expenses against the revenue without the impact of non-cash accounting policies such as depreciation.

"Cost per Bitcoin" represents cost of revenue excluding depreciation, divided by the number of bitcoin mined in the period. This metric is commonly referenced in the bitcoin mining industry and is important to gain an understanding of the profitability in reference to the price of bitcoin.

**Company**

Hut 8 is a bitcoin mining company with industrial scale operations in Alberta, Canada. Hut 8 provides investors with direct exposure to bitcoin through both its bitcoin mining operation and by holding its bitcoin balance. By owning Hut 8, this allows investors to avoid the technical complexity or constraints of purchasing the underlying cryptocurrency. Investors avoid the need to create online wallets, wire money offshore, and safely store their bitcoin.

For its mining activities, Hut 8 utilizes the BlockBox Data Center AC ("BlockBox") which is a modular, portable, and more easily upgradeable to the next generation of silicon technology. The BlockBox is customizable to difference types of mining equipment.

The Company was incorporated under the laws of the Province of British Columbia on June 9, 2011. Its registered office is located at Suite 1700, Park Place, 666 Burrard St, Vancouver, BC, Canada V6C 2X8, and the headquarter of the Company is located at 130 King St. W, Suite 1800, Toronto, ON, Canada, M5X 2A2. The Company's financial year ends on December 31. The Company's common shares are listed under the symbol "HUT" on the Toronto Stock Exchange and as "HUTMF" on the OTCQX Exchange.

**Amended and Restated**  
**For the three and six months ended June 30, 2020**

**Summary**

The second quarter of 2020 began in the fallout of the novel coronavirus pandemic and the shelter in place orders that shook global capital markets and bitcoin, much of which is still being felt by countries across the globe. While the global capital markets gradually recovered from its historic drop on March 12, 2020, the cryptocurrency industry prepared for the bitcoin halving that occurred on May 11, 2020. The bitcoin halving reduced the bitcoin reward per block from 12.5 to 6.25 and occurs every four years making bitcoin continually scarcer.

We saw bitcoin recover as it increased from US\$6,439 on March 31, 2020 to US\$8,602 on the day of the halving, before continuing that momentum to reach US\$9,138 on June 30, 2020. The network difficulty decreased subsequent to the halving by 15%, but quickly returned back to levels prior to the halving. This posed a difficult challenge to many bitcoin miners as they saw the bitcoin block reward drop by 50% with similar network difficulty rates meaning that revenue dropped by nearly 50% for all bitcoin miners. Hut 8 is not an exception to these unfavourable effects as revenue dropped significantly this quarter.

Hut 8, however, has been anticipating the potential effect of the halving and has worked to keep a very lean and flexible operation to reduce costs when necessary. Site operating costs for Q2-2020 were \$8.6 million, a 17% reduction from Q2-2019 of \$10.4 million. With the recent press release that Hut 8 is taking over the full management of the Medicine Hat site operations, the operating costs are expected to continue to be reduced. Net finance expense was \$0.7 million, a 43% decrease from the same period of the prior year of \$1.2 million. Management negotiated a further reduction in the interest rate of its debt from 9.85% to 8% per annum as the bitcoin price stays above US\$6,500, bringing the expected future net finance expense per quarter to \$0.5 million.

Hut 8's strategy of mining and holding bitcoin continued to pay off as there was a \$9.4 million gain on the re-measurement of bitcoin holdings in Q2-2020. Additionally, by only strategically selling bitcoin at peak prices, Hut 8 recorded a \$0.7 million gain on use of digital assets. Overall, for Q2-2020, Hut 8 recorded a net income of \$2.8 million and a negative Adjusted EBITDA of \$86k.

Near the end of the quarter, Hut 8 closed the first prospectus offering by a cryptocurrency mining company in Canada. The capital raise was oversubscribed with the gross proceeds of \$8.3 million. The full amount of the net proceeds was committed for a purchase to upgrade the existing mining equipment with the latest technology available in the market. This new equipment is expected to operate at 275 PH/s with a 12.6 MW of power output. This upgrade is a big step towards modernizing Hut 8's equipment and increasing the overall efficiency of its bitcoin mining fleet.

**Hut 8 Mining Corp.**  
**Management's Discussion and Analysis**  
**Amended and Restated**  
**For the three and six months ended June 30, 2020**

**Discussion of Operations for the three months ended June 30, 2020**

For Q2-2020, the Company mined 795 bitcoin, resulting in revenue generation of \$9.2 million, compared to the same period of the prior year of 2,816 bitcoin mined with revenue of \$28.3 million. The bitcoin halving occurred on May 11, 2020, effectively cutting down the bitcoin production for every miner in half. The network difficulty rate decreased at first but recovered soon after causing a large reduction in revenue for the quarter.

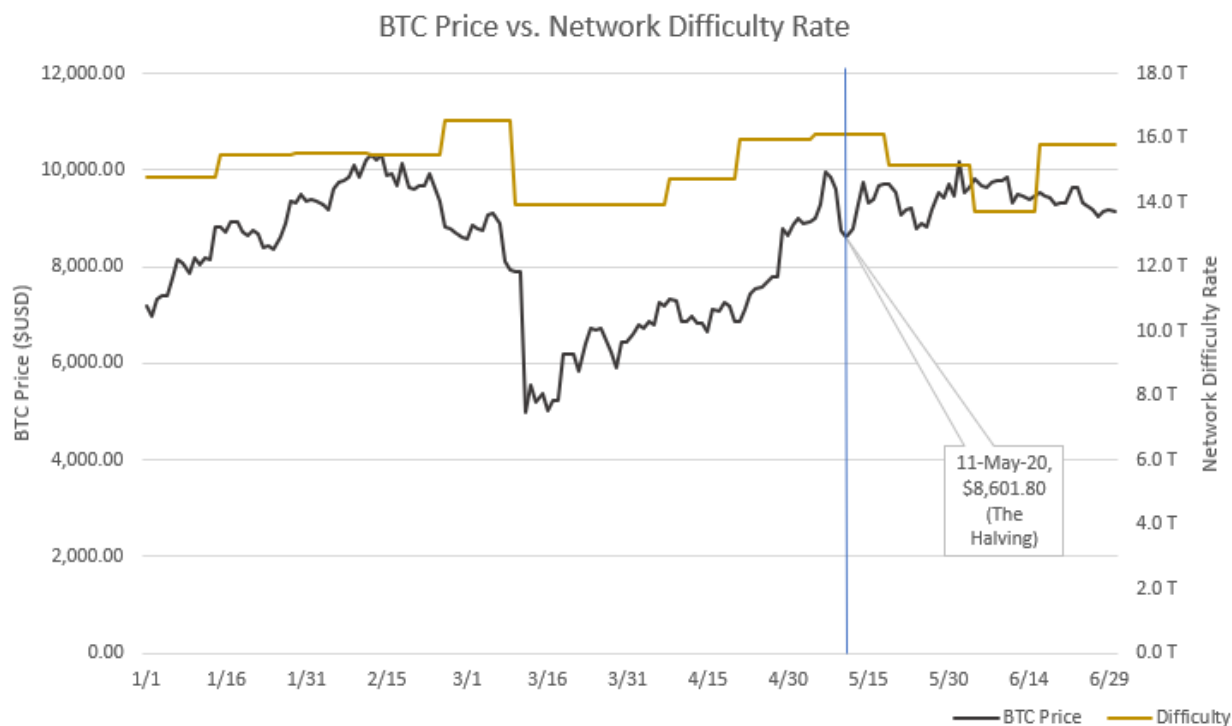

The site operating costs for Q2-2020 were \$8.6 million, a reduction of 17% compared to Q2-2019 costs of \$10.4 million, which represents the costs incurred related to mining the 795 bitcoin. The cost of mining each bitcoin for Q2-2020 was \$10,794 (US\$7,792), compared to Q2-2020 cost of mining of \$3,688 (US\$2,757), calculated by dividing site operating costs by the number of bitcoin mined for the related period.

Expenses for Q2-2020 were \$1.3 million, of which there were non-cash share-based payments of \$60k compared with the same period of the prior year expenses of \$1.3 million of which there were non-cash share-based payments of \$0.7 million. Management has worked to decrease quarterly expenses, especially after the halving occurred. The expenses had a one-time \$500,000 cost for a contract with the previous CEO to provide consulting services during the transition to the current Interim CEO. The share-based compensation was reduced due to the forfeiture of restricted share units of the previous CEO. Hut 8's continued management of expenses has helped maintain a cost structure to maximize profitability as it focuses on staying a low cost bitcoin miner. Hut 8 recorded negative adjusted EBITDA of \$86k and net income of \$2.8 million for Q2-2020, compared to the same period of the prior year adjusted EBITDA gain of \$17.3 million and net income of \$30.2 million. This was due to the worsening bitcoin economics caused primarily by the halving while the bitcoin price did not appreciate proportionately.

For Q2-2020, Hut 8 had a revaluation gain of \$9.4 million, compared to Q2-2020 gain of \$17.3 million, from adjusting the value of the digital assets held in inventory to the market value on the reporting date. This gain is from the increase in bitcoin price from US\$6,439 on March 31, 2020 to the June 30, 2020 price of US\$9,138. Hut 8 also remained strategic at selling its bitcoin inventory for fiat currency, resulting in a realized gain on use of bitcoin \$0.7 million for the three months ended June 30, 2020, compared to Q2-2019 gain of \$5.2 million. In future quarters, the Company would expect to see unrealized gains or losses based on the price of bitcoin on the reporting date, relative to the price on the day mined, when revenue is recorded.

(1) A non-GAAP measure defined above

The bitcoin mining industry does not typically have seasonality; however, the Company may have fluctuations at similar times in the year related to its electricity prices. The Company's operations are solely out of Alberta, Canada where 42MW of power is directly from a power purchase agreement with the City of Medicine Hat and the remainder is from the Alberta electricity grid. Due to the changing weather in Alberta and seasonal electricity needs, time periods of extreme cold or extreme hot weather may result in higher electricity costs. Hut 8 manages electricity costs to avoid peak prices and is constantly monitoring its operations to maximize efficiency.

During the three months ended June 30, 2020, the Company incurred \$3.85 million in electricity cost for its City of Medicine Hat site and \$3.88 million for its Drumheller site. The below chart shows the effect on operations and profitability of the Company if the average cost of electricity were to increase by 10%, 20%, and 30%.

	Apr 2020	May 2020	June 2020	Total
<b>Electricity Cost</b>				
Drumheller	1,379,815	1,496,590	1,015,316	<b>3,891,722</b>

% change		27%	53%	80%

## **Industry Overview**

### ***Bitcoin***

Bitcoin is a digital currency that allows peer-to-peer transactions globally over the internet. Bitcoin is independent of any central authority, such as a bank or government. Instead, bitcoin is governed by a pre-programmed algorithm called Secure Hash Algorithm 256 (SHA-256) that is backed by millions of computers across the world called "miners". Bitcoin miners record transactions and check their authenticity. While fiat currencies are controlled by central banks and governments, bitcoin miners are spread out across the world and store transactions on a digital public ledger called the "blockchain" that can be accessed by anyone. This global and transparent system is referred to as decentralized control as the management of bitcoin does not have a central point of failure or attack.

Unlike fiat currencies, which have an unlimited supply which is controlled by governments and central banks, the supply of bitcoin is controlled by the SHA-256 to keep its availability scarce and total supply fixed. To date, approximately 18 million bitcoin exist and only 21 million bitcoin will ever exist. It is expected that all bitcoin will be mined by 2140. Due to the scarcity and computational power required to mine bitcoin, it is often referred to as "digital gold", as physical gold is also scarce and is costly to mine.

### ***Blockchain***

The bitcoin "blockchain" is a cloud-based digital public ledger where bitcoin transactions are grouped together and represented as a block in a network chain, containing all relevant transaction details. The bitcoin blockchain is maintained by a community of miners. All transactions on the blockchain are transparent and designed to make it impossible to add, remove or change data without being detected by users.

### ***Bitcoin Mining***

Mining is the process of verifying bitcoin transactions by solving a computationally difficult encrypted code, called a "hash". The hash rate is the number of attempts at solving the encryption code the equipment can process per second. Miners use equipment that produces a high hash rate, as it results in more attempts at solving the encrypted code. The average hash rate for a two-week period determines the network difficulty rate, which is set every two weeks. The network difficulty is a measure of how difficult it is to solve a block. This computational process of decrypting the code through hashing is referred to as "proof of work". Bitcoin miners use powerful Application Specific Integrated Circuit ("ASIC") computing chips to compete with each other to correctly solve the encryption code.

The power of the ASIC chip to produce a high number of hashes is essential to successfully mining. When a miner is successful in solving the code, a block containing transactions is validated and incorporated into the blockchain resulting in an economic incentive payment for the miner in the amount of 12.5 newly minted bitcoins plus potential transaction fees. This incentive payment halves every four years, the most recent of which occurred on May 11, 2020.

When mining Bitcoin, Hut 8 measures the output to process in computer hash rates. For example, one PH/s processes one quadrillion hashes per second that constantly attempts to solve the bitcoin cryptology code and receive the bitcoin incentive payment.

**Hut 8 Mining Corp.**  
**Management's Discussion and Analysis**  
**Amended and Restated**  
**For the three and six months ended June 30, 2020**

***Hut 8 Custody of Bitcoin***

For the protection of its bitcoin on behalf of shareholders, Hut 8 does not self-custody its bitcoin. Instead, Hut 8 uses the services of BitGo Trust Company Inc. ("BitGo"). BitGo has US\$100 million of insurance backing its digital asset custody and one of the highest levels of regulatory certifications in the market. BitGo is financially backed by Wall Street firms including Goldman Sachs. Hut 8 utilizes both cold and hot storage for bitcoin with BitGo.

Hut 8 continues to explore new ways to enhance the custody of its bitcoin and improve security for shareholders.

**Significant Agreements**

On November 29, 2017, the Company entered into a Master Data Centre Purchase Agreement (the "MPA") with Bitfury. The MPA governs the terms and conditions for the purchase from Bitfury of certain equipment (the "Data Centres") used for the purpose of running diverse cryptographic hash functions in connection with the mining of cryptocurrency. The MPA is for a term of five years, with two successive renewal terms of one year each.

Concurrent with the MPA, on November 29, 2017, the Company entered into a Master Service Agreement (the "MSA") with Bitfury. In accordance with the MSA, Bitfury shall provide the management, maintenance, support, logistics and operational services (the "Services") required to run the Data Centres. The MSA is for a term of five years, with two successive renewal terms of one year each.

On February 21, 2020, the Company and Bitfury agreed to amend these key agreements, with the intent of reducing operating costs and providing more autonomy to Hut 8 in managing its operations. Hut 8 will have improved flexibility to work with outside equipment vendors and Bitfury will have the ability to work with other miners in North America as well.

The Company entered into definitive agreements with the City of Medicine Hat ("CMH") for the supply of electric energy, and the lease of land upon which Hut 8 is constructed its mining facilities. For electricity, an Electricity Supply Agreement ("ESA") was executed, whereby CMH will provide electric energy capacity of approximately 67 MW to the new Hut 8 facilities, which in conjunction with the Company's approximate 40 MW in operation in Drumheller, will allow Hut 8 to operate at 107 MW in total. The ESA and the land lease have a concurrent term of 10 years. The minimum payments on the land lease are \$1,395 per month up to December 31, 2027.

**Liquidity and Capital Resources**

As at June 30, 2020, the Company had a working capital surplus of \$16.4 million, (December 31, 2019 - \$6.0 million) and shareholders' equity of \$41.8 million.

Net cash used in operating activities was \$2.4 million, which does not include the bitcoin mined but not yet converted to cash. Cash provided by investing activities amounted to \$0.5 million which was mainly used for electricity deposit at the Drumheller facility. Cash provided by financing activities was \$7.7 million, net of the proceeds from the Company's public offering completed on June 25, 2020, the finance draw from the loan extension with Genesis Global Capital, LLC ("Genesis"), and the payment of the Bitfury loan.

As at June 30, 2020, the Company had cash on hand of \$8.7 million (December 31, 2019 - \$2.9 million) and digital assets of \$36.8 million (December 31, 2019 - \$27.3 million).

**Hut 8 Mining Corp.**  
**Management's Discussion and Analysis**  
**Amended and Restated**  
**For the three and six months ended June 30, 2020**

The Company's ability to continue as a going concern and realize its assets and discharge its liabilities in the normal course of business is dependent upon maintaining sustained profitability and maintaining the Company's loans in good standing. There are various risks and uncertainties affecting the Company's operations including, but not limited to, the viability of the economics of bitcoin mining, the liquidity of bitcoin, the Company's ability to maintain its security of its digital assets and execute its business plan. The Genesis loan requires bitcoin collateral. If the bitcoin price reaches a price where Hut 8 does not have the bitcoin to sufficiently collateralize the loan, then after a cure period of 10 days, Genesis may be able to liquidate a significant portion of Hut 8's bitcoin, demand immediate repayment of the loan, or terminate the loan agreement.

The Company's strategy to mitigate these risks and uncertainties is to execute a business plan aimed at continued security, operational efficiency, revenue growth, improving overall mining profit, managing operating expenses and working capital requirements, and securing additional financing, as needed, through one or more of loans and equity investments. Given the volatility in the financial markets, it may be difficult to raise financing when needed. Failure to implement the Company's business plan could have a material adverse effect on the Company's financial condition and/or financial performance. Accordingly, there are material risks and uncertainties that cast significant doubt about the Company's ability to continue as a going concern.

On November 20, 2019, the Company finalized a loan for \$19,956,000 (US\$15,000,000) to Genesis. The loan bears interest at 9.85% per annum, payable monthly, and matures on May 21, 2021. 85% of the loan is collateralized with bitcoin that has been transferred to Genesis. If the collateralized value of the bitcoin drops below 75% of the loan, additional bitcoin will be sent to Genesis to bring the collateral level back to 85%. Conversely, if the collateralized bitcoin value goes over 95% of the loan, bitcoin will be returned to the Company as long as the 85% level remains satisfied. These funds were used to repay the loan with Galaxy.

On February 18, 2020, the Company completed a loan extension with Genesis for \$6,615,500 (US\$5,000,000). The loan bears interest at 9.85% per annum, payable monthly, and matures on Feb 18, 2021. 100% of the loan is collateralized with bitcoin that has been transferred to Genesis. If the collateralized value of the bitcoin drops below 90% of the loan, additional bitcoin will be sent to Genesis to bring the collateral level back to 100%. Conversely, if the collateralized bitcoin value goes over 110% of the loan, bitcoin will be returned to the Company as long as the 100% collateral level remains satisfied. These funds were used to repay the loan with Bitfury.

On June 25, 2020, the Company completed its public offering (the "Offering"), and, with the underwriters exercising their over-allotment option, issued 5,750,456 units ("Unit") at a price of \$1.45 per Unit for gross proceeds of \$8,338,161. Each unit comprises of one common share (each a "Common Share") and one Common Share purchase warrant of the Company (each a "Warrant"). Each Warrant entitles the holder thereof to acquire one additional common share of the Company at an exercise price of \$1.80 per share at any time for a period of 18 months. The Warrants are determined at \$2,635,544 under the related fair value approach using the Black-Scholes Option Pricing model based on the following assumptions: expected life of 1.5 years, interest rate of 0.30%, volatility of 128% and dividend yield of 0%. The Company paid commissions and fees totaling \$843,541 and issued 345,027 broker warrants with a fair value of \$127,986. The broker warrants are determined using the Black-Scholes Option Pricing model based on the following assumptions: expected life of 2 years, interest rate of 0.30%, volatility of 118% and dividend yield of 0%.

On July 13, 2020, the Company successfully renegotiated key terms of the loans with Genesis. The interest rate on the full amount of the loan, US\$20 million, was reduced to 8.00% from 9.85% per annum. The bitcoin collateral required increased from 85% of the loan value to 95%. Additionally, if the price of bitcoin drops below US\$6,500, the bitcoin collateral will automatically drop to 80% of the loan value, while interest rate adjusts to 10.00% per annum until the bitcoin price once again increases above US\$6,500. The loan will continue indefinitely with Genesis being able to call the loan with five months' notice, while the Company will have the option to repay with one month's notice and no prepayment penalty.

**Hut 8 Mining Corp.**  
**Management's Discussion and Analysis**  
**Amended and Restated**  
**For the three and six months ended June 30, 2020**

**Off-Balance Sheet Arrangements**

As of the date of this MD&A, the Company does not have any off-balance sheet arrangements that have, or are reasonably likely to have, a current or future effect on the results of operations or financial condition of the Company including, without limitation, such considerations as liquidity and capital resources that have not previously been discussed.

**Financial Instruments and Business Risks**

The Company's risk exposures and the impact on the Company's financial instruments are summarized below.

***Credit risk***

Financial instruments that potentially subject the Company to a concentration of credit risk consist primarily of cash and deposits and prepaid expenses. The Company limits its exposure to credit loss by placing its cash with high credit quality financial institutions.

For the protection of its bitcoin on behalf of shareholders, Hut 8 does not self-custody its bitcoin. Instead, Hut 8 uses the services of BitGo. BitGo has US\$100 million of insurance backing its digital asset custody and one of the highest levels of regulatory certifications in the market. BitGo is financially backed by Wall Street firms including Goldman Sachs.

***Interest Rate Risk***

Interest rate risk is the risk that the fair value of future cash flows of a financial instrument will fluctuate because of changes in market interest rates. The Company's exposure to interest rate risk is limited and only relates to its ability to earn interest income on cash balances nominated in foreign currency at variable rates. Changes in short term interest rates will not have a significant effect on the fair value of the Company's cash account.

***Liquidity Risk***

Liquidity risk is the risk that the Company will not be able to meet its financial obligations as they fall due. The Company currently settles its financial obligations out of cash and cash equivalents and digital assets. The Company has a planning and budgeting process to help determine the funds required to support the Company's normal spending requirements on an ongoing basis and its expansionary plans.

As at June 30, 2020 the contractual maturities of financial liabilities, including estimated interest payments are as follows:

	<b>Carrying amount</b>	<b>Contractual Cashflows</b>	<b>Within 1 year</b>	<b>1 to 2 years</b>	<b>2 to 5 years</b>	<b>5+ years</b>
Accounts Payable and accrued liabilities	\$ 2,580,128	\$ 2,580,128	\$ 2,580,128	\$ -	\$ -	\$ -
Loans payable and interest	\$ 27,583,240	\$ 29,436,479	\$ 29,436,479	\$ -	\$ -	\$ -
Lease commitments	\$ 327,241	\$ 691,651	\$ 35,577	\$ 35,577	\$ 69,231	\$ 551,266
	<b>\$ 30,490,609</b>	<b>\$ 32,708,258</b>	<b>\$ 32,052,184</b>	<b>\$ 35,577</b>	<b>\$ 69,231</b>	<b>\$ 551,266</b>

**Hut 8 Mining Corp.**  
**Management's Discussion and Analysis**  
**Amended and Restated**  
**For the three and six months ended June 30, 2020**

***Foreign Currency Risk***

Foreign currency risk is the risk that the value of a financial instrument will fluctuate due to changes in foreign exchange rates. Foreign currency risk arises from financial instruments (including cash and cash equivalents) that are denominated in a currency other than Canadian dollars, which represents the functional currency of the Company. The Company's functional currency is the Canadian dollar and most purchases are transacted in Canadian dollars. The Company has also transacted in US Dollars to purchase mining equipment from Bitfury and with loans payable denominated in US Dollars. Management currently does not hedge its foreign exchange risk.

***Concentration Risk***

Concentration risk arises as a result of the concentration of exposures within the same category, whether it is geographical location, product type, industry sector or counterparty type. Currently, the Company has its investment highly concentrated in a single asset, bitcoin. The Company tracks the market price of bitcoin, less the Company's liabilities and expenses, by investing in the assets of the company in bitcoin.

***Price Volatility Risk***

The Company is at risk due to a wide fluctuation in the price of bitcoin, the speculative nature of the underlying asset, and negative media coverage. Downward pricing of bitcoin may adversely affect investor confidence, and subsequently, the value of the Company's bitcoin inventory, its stock price, and profitability.

***Security Risk***

Bitcoins are controllable only by the possessor of both the unique public key and private key relating to the local or online digital wallet in which the bitcoins are held. The bitcoin network requires a public key relating to a digital wallet to be published when used in a spending transaction and, if keys are lost or destroyed, this could prevent trading of the corresponding bitcoins.

Security breaches, computer malware and computer hacking attacks have been a prevalent concern in the bitcoin exchange market since the launch of the bitcoin network. Any security breach caused by hacking could cause loss of bitcoin investments.

***Bitcoin Network Risk***

The open-source structure of the bitcoin network protocol means that the core developers of the bitcoin network and other contributors are generally not directly compensated for their contributions in maintaining and developing the bitcoin network protocol. A failure to properly monitor and upgrade the bitcoin network protocol could damage the bitcoin network.

**Hut 8 Mining Corp.**  
**Management's Discussion and Analysis**  
**Amended and Restated**  
**For the three and six months ended June 30, 2020**

***Digital Assets and Risk Management***

Digital assets are measured using level two fair values, determined by taking the rate from Coinmarketcap.com.

Digital asset prices are affected by various forces including global supply and demand, interest rates, exchange rates, inflation or deflation, and the global political and economic conditions. The profitability of the Company is directly related to the current and future market price of bitcoin; in addition, the Company may not be able liquidate its inventory of digital assets at its desired price if required. A decline in the market price for bitcoin could negatively impact the Company's future operations. The Company has not hedged the conversion of any of its sales of bitcoin.

Bitcoin has a limited history and the fair value historically has been volatile. Historical performance of bitcoin is not indicative of its future price performance. The Company's digital assets currently solely consist of bitcoin.

**Related Party Transactions**

See the unaudited condensed consolidated interim financial statements for the three months ended June 30, 2020, for related party transactions with respect to share issuances.

During the three and six months ended June 30, 2020, the Company was charged \$1,502,668 (2019 - \$5,657,807) and \$1,933,203 (2019 - \$10,056,086), respectively, in site operating costs. As at June 30, 2020, \$316,690 (June 30, 2019 - \$6,671,244) was owed to Bitfury, which has been included in accounts payable.

The Company also made payment to Andrew Kiguel, the previous CEO, through his numbered corporation 1138029 B.C. Ltd, a one-time \$500,000 consulting fee to assist with the transition to the new CEO.

These transactions were made on terms equivalent to those that prevail in arm's length transactions.

### **Critical Accounting Estimates and Accounting Policies**

The following are the estimates and assumptions that have been made in applying the Company's accounting policies that have the most significant effect on the amounts in the unaudited condensed consolidated interim financial statements:

***i. Fair value measurement of stock options and broker warrants***

The Company measures the cost of equity-settled transaction by reference to the fair value of the equity instruments at the date on which they are granted. Estimating fair value requires determining the most appropriate valuation model, which is dependent on the terms and conditions of the grant. This estimate also requires the determination of the most appropriate inputs to the valuation model including the expected life of the broker warrants, volatility and dividend yield and making assumptions about them.

***ii. Revenue recognition***

The Company recognizes revenue from the provision of transaction verification services within the bitcoin blockchain, and as consideration for these services, the Company receives bitcoin. Revenue is measured based on the fair value of the bitcoin received. The fair value is determined using the closing bitcoin price each day per Coinmarketcap. The Company is relying on the data available at Coinmarketcap to be an accurate representation of the closing price for the digital assets.

***iii. Fair value of digital assets***

Digital assets, consisting solely of bitcoin, are measured at fair value using the quoted price on Coinmarketcap. Management considers this fair value to be a level two input under IFRS 13 Fair Value Measurement fair value hierarchy as the price on this source represents an average of quoted prices on multiple digital currency exchanges. The bitcoin is valued based on the closing price obtained from Coinmarketcap at the reporting period corresponding to the digital assets mined by the Company.

The Company's determination to classify its holding of bitcoin as current assets is based on management's assessment that its bitcoin held can be considered a commodity and the availability of liquid markets to which the Company may sell a portion or all of its holdings.

***iv. Non-monetary transactions***

Non-monetary transactions for the exchange of bitcoin for various goods and services are measured at the fair value determined from the exchange amount. Fair value of the bitcoin is determined at the time of transaction.

***v. Share based transactions***

Equity-settled share-based payment transactions with parties other than employees are measured at the fair value of the goods or services received, except where that fair value cannot be estimated reliably, in which case they are measured at the fair value of the equity instruments granted, measured at the date the entity obtains the goods or the counterparty renders the service.

The Company issued broker warrants as part of brokered private placement offering for common shares. Broker warrants are measured at fair value at the date of the offering and accounted for as a separate component of shareholders' equity. When the broker warrants are exercised, the proceeds received together with the related amount allocated as a separate component of shareholders' equity are allocated to capital stock. If the broker warrants expire unexercised, the related amount separately allocated to shareholders' equity is allocated to contributed surplus.

**Hut 8 Mining Corp.**  
**Management's Discussion and Analysis**  
**Amended and Restated**  
**For the three and six months ended June 30, 2020**

**vi. Useful life of mining equipment**

Management is depreciating mining equipment using a straight-line basis, with a useful life of:

Seacan containers and supporting infrastructure	4 years
Mining servers	2 years

The mining equipment is used to generate bitcoin. The rate at which the Company generates digital assets and, therefore, consumes the economic benefits of its mining equipment are influenced by several factors including, but not limited to, the following:

- The complexity of the mining process which is driven by the algorithms contained within the digital assets open source software; and
- Technological obsolescence reflecting rapid development in the mining machines such that more recently developed hardware is more economically efficient to run in terms of digital assets mined as a function of operating costs, primarily power costs (ie., the speed of mining machines evolution in the industry) is such that later mining machine models generally have faster processing capacity combined with lower operating costs and a lower cost of purchase.

Based on the Company and the industry's limited history to date, management is limited by the market data available. Furthermore, the data available also includes data derived from the use of economic modelling to forecast future digital assets and the assumptions included in such forecasts, including digital asset's price and network difficulty, and derived from management's assumptions. Based on current data available, management has determined that the straight-line method of amortization best reflects the current expected useful life of mining equipment. Management will review their estimates at each reporting date and will revise such estimates as and when data become available. Management will review the appropriateness of its assumption related to residual value at each reporting date.

**vii. Taxes**

Uncertainties exist with respect to the interpretation of complex tax regulations, changes in tax laws, and the amount and timing of future taxable income. The Company has not recognized the value of any deferred tax assets in its statements of financial position.

The Company recognizes the tax benefit from an uncertain tax position only if it is more likely than not that the tax position will be sustained based on its technical merits. The Company measures and records the tax benefits from such a position based on the largest benefit that has a greater than 50% likelihood of being realized upon ultimate settlement. The Company's estimated liabilities related to these matters are adjusted in the period in which the uncertain tax position is effectively settled, the statute of limitations for examination expires or when additional information becomes available. The Company's liability for unrecognized tax benefits requires the use of assumptions and significant judgment to estimate the exposures associated with our various filing positions. Although the Company believes that the judgments and estimates made are reasonable, actual results could differ and resulting adjustments could materially affect our effective income tax rate and income tax provision.

The Company has earned bitcoin from the commercial activity of bitcoin mining. The Company has followed the published Canada Revenue Agency ("CRA") view that bitcoin is a commodity and inventory of the business, the value of which is included in the calculation of taxable income from the business. Bitcoin is valued in accordance with Section 10 of the Income Tax Act. Revenue from bitcoin mining is included in taxable income when the bitcoin earned is sold or exchanged for cash or another asset. There is uncertainty regarding the taxation of cryptocurrency and the CRA may assess the Company differently from the position adopted. This could result in additional current taxes payable with equal offset to deferred tax expense.

**Hut 8 Mining Corp.**  
**Management's Discussion and Analysis**  
**Amended and Restated**  
**For the three and six months ended June 30, 2020**

**Capital Management**

The Company's capital currently consists of Common Shares. The Company's capital management objectives are to safeguard its ability to continue as a going concern and to have sufficient capital to be able to identify, evaluate and then acquire an interest in a business or assets. The Company does not have any externally imposed capital requirements to which it is subject. The Company manages the capital structure and makes adjustments to it in light of changes in economic conditions and the risk characteristics of the underlying assets. To maintain or adjust the capital structure, the Company may attempt to issue new shares.

**Management's Report on Disclosure Controls and Procedures and Internal Control over Financial Reporting**

Management is committed to delivering timely and accurate disclosure of all material information.

Disclosure controls and procedures ensure that reporting requirements are satisfied, and that material information is disclosed in a timely manner. Due to the limitation on the ability of the officers to design and implement cost-effective policies for disclosure controls and procedures and internal control over financial reporting, the officers are not making representations that such controls and procedures would identify and allow for reporting material information on a timely basis, nor are they representing that such procedures are in place that provide reasonable assurance regarding the reliability of financial reporting.

However, as permitted for TSX issuers, the CEO and CFO individually have certified that after reviewing the unaudited condensed consolidated interim financial statements for the three months and six months ended June 30, 2020 and this MD&A of the Company, there are no material misstatements or omissions, and the filing materially presents the unaudited condensed consolidated interim financial position and consolidated results of operations and cash flows for the three months and six months ended June 30, 2020 and all material subsequent activity up to August 13, 2020.

**Share Capital**

As of the date of this MD&A, the Company has issued, and outstanding share capital comprised of 96,732,324 Common Shares, 795,000 stock options, 8,317,205 warrants, and 241,667 restricted share units.

Additional information and other publicly filed documents relating to the Company are available through the internet on the Canadian Securities Administrators' System for Electronic Document Analysis and Retrieval ("SEDAR"), which can be accessed at [www.sedar.com](http://www.sedar.com).
